

RICKROMAN T. LOBATON

Malabon City, Philippines | 09455316499 | Rickroman.rl@gmail.com | github.com/Erroookie

SUMMARY

IT graduate transitioning into software development, with hands-on project experience building full-stack web applications (PHP/MySQL) and embedded/mobile systems (Arduino, Android). IT support background adds practical understanding of real infrastructure and troubleshooting that complements coding ability across the stack.

PROJECT EXPERIENCE

Inventory & Sales Management System (Mini POS)

2026

Independent Project — PHP, MySQL, Bootstrap, JavaScript

- Built a full-stack inventory and point-of-sale web application using PHP, MySQL (PDO), and Bootstrap, supporting role-based authentication for admin and cashier users.
- Designed a normalized relational database schema with foreign key constraints to protect historical transaction records, preventing deletion of products that appear in past sales.
- Implemented atomic database transactions with row-level locking (SELECT ... FOR UPDATE) in the checkout flow to prevent race conditions and stock corruption during concurrent sales.
- Built server-side validation that re-checks stock and payment amounts independently of client-side checks, following the principle of never trusting client input.
- Developed an admin reporting module using aggregate SQL queries (GROUP BY, SUM, JOIN) to surface top-selling products and daily revenue trends.

Automatic Sliding Gate System (Capstone Project)

Jun 2024 – Present

Project Member — Android Studio, Arduino, RFID

- Developed an Android application in Android Studio for remote gate control, including a dashboard for activity time logs.
- Collaborated on an automated sliding gate system built on Arduino Uno, integrating RFID authentication for secure access control.
- Participated in system testing and troubleshooting across hardware and software components, and contributed to technical documentation as part of a multi-person team.

WORK EXPERIENCE

IT Intern / On-the-Job Trainee

Feb 2025 – May 2025

Intellyx IT Solutions — Malabon City

- Diagnosed and resolved hardware and software issues across 15+ desktop computers and servers, reducing average downtime by 30%.
- Configured and deployed Active Directory shared folders with automated drive mapping and login authentication for 20+ employees.
- Conducted system checks and basic network configuration, documenting 20+ service reports that improved troubleshooting efficiency by 25%.

EDUCATION

Bachelor of Science in Information Technology (BSIT)

Graduated Jul 2025

City of Malabon University — Malabon City, Philippines

TECHNICAL SKILLS

Programming & Web Development: PHP, MySQL (PDO), JavaScript, HTML/CSS, Bootstrap, Python, C++, Java, Git/GitHub

Concepts: Relational database design, CRUD operations, database transactions, REST-style AJAX endpoints, version control

IT SUPPORT & SYSTEMS

Systems & Networking: Active Directory, Group Policy, Windows Administration, Network Troubleshooting, Hardware Diagnostics, Microsoft 365, Drive Mapping

Other: Problem Solving, Critical Thinking, Communication, Technical Documentation

INTERESTS

Software Development, Emerging Technology, Networking, Cybersecurity, AI
